

The facts at a glance:

- **3 years warranty** on the whole arrow
- **Independently safety tested** by the leading German Live-Role-Playing magazine ("LARPZeit" #11).
- The **aerodynamically optimised safety-head**, 53 mm in diameter provides optimum safety, durability and striking distance.
- The **captive fletching** increase the arrow's lifetime and guarantee lasting safety.
- The high grade **epoxy-glass resin shaft** is highly flexible, shatter proof and provides maximum accuracy.
- Almost **unlimited delivering ability** due to industrial suppliers.
- Also available in **classical design** (Ø58 mm, flat-headed, with reduced flight range), **as 15" Crossbow bolts** and with **night glow** feathering.
- **Length** (total): approx. 820 mm (32 ½ inch)
- **Mass**: approx. 68 g (2 ¼ oz)
- **More than 50 m striking distance @ 30 lbs. x 28" draw weight**

Safety and fun made by IDV engineering:
Also available in conventional design and
as Crossbow bolt.

Easygoing fun guaranteed !

The first safety arrow that comes with its own product insurance:

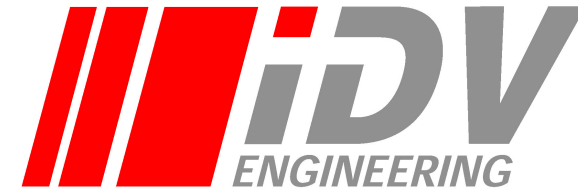

up to
2,0 Mio. Euro in case of personal injury
1,0 Mio. Euro in case of property damage

is covered by the insurance company
VICTORIA Versicherung AG, if ever a
person gets hurt or property gets damaged
due to a defectively delivered product.

Safety is more than a promise !

- **Pure Fun**

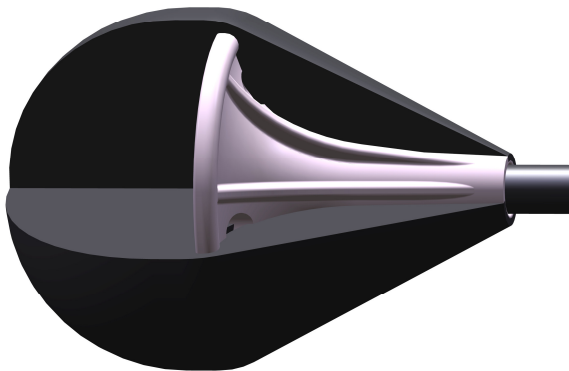

The market leader in Europe: Safety arrows for live role
playing from IDV engineering

1. The safety head

Safe and sparing energy absorption due to the use of state-of-the-art high performance foam.

The inlay is made of unbreakable, highly impact resistant plastics. It enfolds the shaft safely while the impact force is distributed equally and safely into the whole, cushioning.

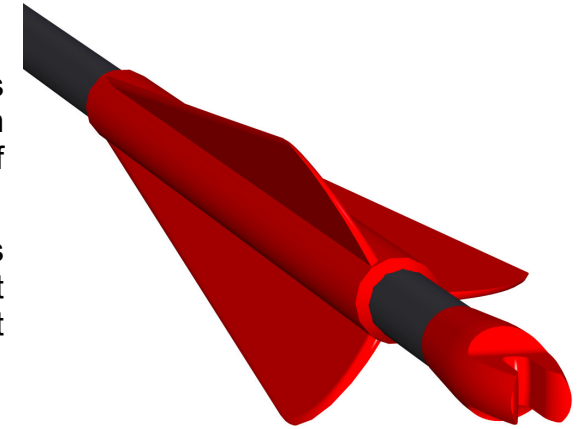

Covered by a **3 years full guarantee** the new design has not only been winning independent safety tests, but also turned out to be almost indestructible even under most extreme test conditions.

2. The shaft

A 30" long, high grade, rugged epoxy-glass resin arrow shaft guarantees maximum durability even under the tough conditions of live action role play.

Optimised to the usual draw weight of bows that are usually used in live action role play, it does not only provide a pleasing design, but also an outstanding accuracy.

3. The fletching

Developed for the application in live action role play and other extremely tough employment the **captive fletching** provide maximum durability and arrow lifetime.

The amply dimensioned plastic feathers provide best stability and maximum marksmanship even on great distances. 5 standard colours (red, blue, green, black and night glow) are available from stock.

4. The flight quality

The aerodynamically optimised safety head and the selected high grade components provide unique reach and marksmanship without increasing the arrow's maximum energy.

Professional, industrial production guarantees an invariable high quality.

This results in unmatched accuracy and more than **50 m (55 yards) striking distance** (@ 30 lbs x 28") !
