

The facts at a glance:

- **4 years limited warranty*** on every arrow
- **Independently safety tested** by the leading German Live-Role-Playing magazine ("LARPZeit" #11).
- The **captive fletching** made from highly elastic plastics increase the arrow's lifetime and guarantee lasting safety.
- The high grade **epoxy-glass resign shaft** is highly flexible, shatter proof and provides maximum accuracy.
- Almost **unlimited delivering ability** due to industrial suppliers.
- Also available as **15" Crossbow bolts** and with **night glow** feathering.
- **Length** (total): approx. 820 mm (32 ½ inch)
- **Mass**: approx. 68 g (2 ¼ oz)
- **More than 50 m striking distance @ 30 lbs. x 28" draw weight**

* **Limited warranty:** We will replace or repair any arrow for free if it fails within the period of 3 years after purchase due to weak or defective material or components, but not if the damage results from normal wear and tear, exceeding specifications or was caused by misuse. Our liability is also limited to free of charge repair or replacement of the defective product itself.

Safety and fun made by IDV engineering:
Also available as Crossbow bolt and in classic design

General warning and safety advice:

Do not aim or shoot at humans or living animals. Use only in a safe and fenced area. Keep out of reach of children. Do not shoot at valuable and/or damageable goods other than specific targets. Check every arrow properly for damage before reusing it. Never use damaged arrows. Exceeding the max. draw weight can result in severe injuries. As padded arrows can bounce back, keep sufficient distance to your target. Wear safety gloves.

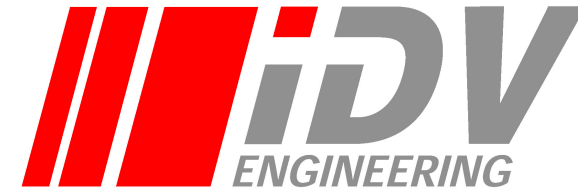

MAXIMUM DRAW WEIGHTS:

30 lbs @ 28" (ARROWS)

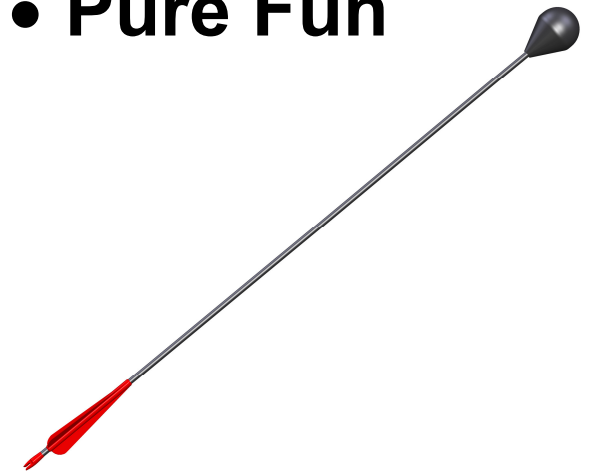

15 lbs @ 14" (BOLTS).

The market leader in Europe: Safety arrows
from IDV engineering

1. The safe arrow head

Safe and gentle energy absorption due to the use of state-of-the-art high performance foam.

The inlay is made of unbreakable, highly impact resistant plastics. It safely wraps the shaft while the force of the impact is distributed equally and safely into the cushion of the arrow head.

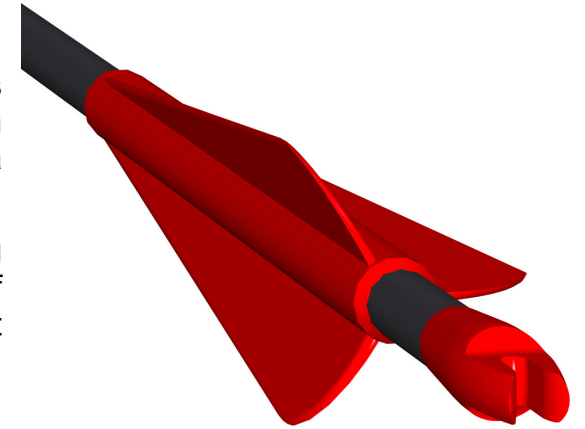

Covered by a **4 years limited guarantee*** the new design has not only been winning independent safety tests, but also tested as being nearly indestructible even under most extreme test conditions.

2. The shaft

A 30" long, high grade, rugged epoxy-glass resin arrow shaft guarantees maximum durability even under the tough conditions of a sportive environment.

Not only does it have an aesthetically pleasing design, but it is optimized to the draw weight of low force bows while maintaining excellent accuracy.

3. The fletching

Developed for the application in live action role play in Germany the **captive fletching** provide maximum durability and arrow lifetime.

The amply dimensioned plastic feathers provide best stability and maximum marksmanship even on great distances. Six standard colors (red, purple-red, blue, green, black and night glow) are available from stock.

4. The flight quality

The aerodynamically optimized safety head and the selected high-grade components provide long range accuracy without increasing the arrow's maximum energy.

Professional, industrial production guarantees an invariable high quality.

The results are unmatched precision and more than **50 m (55 yards) striking distance** (@ 30 lbs x 28") !
